(a) I2T

Nucleoli and Plasma membrane of SH-SY5Y

MicroCLIP

This monochrome fluorescence micrograph illustrates the nucleoli and plasma membrane distribution within a confluent population of SH-SY5Y cells. The image is characterized by ...

DFN2B-CLIP

This monochrome fluorescence micrograph illustrates the Mitochondria_and_Nuclear_bodies distribution within a confluent population of RH-30_5 cells. The image is characterized by...

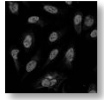

CLIP

This monochrome fluorescence micrograph illustrates the centrosome, cytokinetic bridge, cytosol, and plasma membrane distribution within a confluent population of A-431 cells. The image is presented in...

(b) T2I

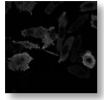

This monochrome fluorescence micrograph illustrates the intermediate filaments and nucleoplasm distribution within a dense population of U-2 OS cells. The image is characterized by a high-contrast, black-and-white presentation where the background is uniformly dark, providing a stark contrast to the signal-emitting cellular structures.

MicroCLIP

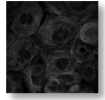

Intermediate filaments and Nucleoplasm of U-2_OS

DFN2B-CLIP

Cytosol and Focal adhesion sites of PC-3_1

CLIP

Cell junctions and Cytokinetic bridge and Microtubules of A-431_1
